○ Carcinogenicity

* IARC

- [Titanium dioxide] : Group 2b * IARC (International Cancer Research Institute) classified TiO₂ as potentially carcinogenic, but IARC's TiO₂ carcinogenicity research paper does not suggest that serious exposure will occur if it is included in a paint-like substance. The National Institute of Occupational Safety and Health (NIOSH) reported that cancer increased only in animal chronic inhalation studies using ultra-fine TiO₂ of less than 100 nm. Therefore, the particle size of TiO₂ used in this product is 280-360nm, it is difficult to determine that cancer may occur.
