Digital functional dentistry Measurement matters!

Event

After a few years of silence we are back this year with a primeur. The first North-West European event about function in dentistry! The Dutch forerunner of "T-Scan days" has been a great succes over the last 10 years with a growing number of attendees. In 2017 we had the privilege of organizing an international event and this year we're going to step up and organize two days with fantastic speakers.

We are really happy that we have combined our forces this year with Eddie Basson from Denmark who will help us organize this fantastic event.

Topics that will be presented is how to optimize your occlusion and articulation with a digital workflow. What the result can be of a malocclusion and more important, how to solve this.

The speakers will present different equipment which they use in their treatment to accomplish this. The main goal will be to present you as an attendee with the know how and steps so you can implement this in your own practice. This knowledge will be shared through main lectures and workshops

Cost: €1495,- ex vat

Speakers

Join Dr. Miguel Stanley, a world-renowned figure in advanced and integrative biological dentistry, for an insightful lecture on revolutionizing modern dental practice. This session will explore the integration of state-of-the-art technologies such as T-scan, Cone Beam Computed Tomography (CBCT), Intraoral Scanners (IOS), facial scanners, and dynamic motion tracking. Emphasizing their pivotal role in enhancing patient care, boosting sales, and minimizing risks, Dr. Stanley aims to showcase how these technologies can transform dental practices.

The importance of a proper diagnosis cannot be overstated in the practice of Dental Medicine. The treatments must address the needs and the desires of the patients while focusing on the etiological origins of the presentations. The advancements of digital technologies, such as biometrics are changing the diagnostic process and improving the delivery of treatments. The objective evaluation of the stomatognathic system enables the dental physicians to access the clinical presentations with much improved accuracy and reliability. The proposed program is a brief overview of these biometrics applied to actual clinical situations in reference to existing diagnostic and research criteria. The hope is to incite curiosity and a desire to access and introduce these technologies in the Dental Medicine practice.

Teeth are Talking to You And what is the TMJ telling me? After 30 years working in general dentistry and orthodontics, I started, as an occlusionist, using T-Scan. I discovered what a tremendous influence balanced occlusion and articulation, and the role of T-Scan has on functionality AND well-being of the patient. Before, during and after treatment. I hope to take you along these 8 years of experience and to let you look over my shoulder in order to change your approach too and thereby contributing to better dentistry.

Mariëlle Peuchen graduated in 2019 at the University of Groningen (RUG). Her thesis was a retrospective pilot study about the role of a digital occlusion analysis in the treatment of persistent toothache regarding endodontically treated teeth. With her study, she obtained third place of the Boeringprijs contest. On the T-Scan Together days, Mariëlle will talk about the studies conducted at the university of Groningen and her journey of the past five years in getting to learn how to work with the T-Scan.

The thousands of patients I have seen throughout my career so far, has given me a good understanding of what's important. We need to have a possibility to do a thorough examination, use next level communication tools, and of course be able to validate our work. And that is exactly what I will be focusing on in my presentation, using equipment from BioResearch, TekScan and 3Shape. Dragging every patient through all the equipment is time consuming and tiring. I will show different cases and talk about the different examinations I do, and why. These tools can be implemented in your daily workflow, no matter what kind of beliefs you have as a dentist.

Location

Olympic stadion Amsterdam

The event will take place at the olympic stadium of Amsterdam. This beautiful location has all the facilities to make it a great event! With the historical history of the place we are sure to create an event which will be unforgettable. Several nice hotels are on walking distance. For our attendees who come by car there is a parking garage underneath the location so you don't have to worry about where to park! We've a parking ticket reserved for you!

Olympisch Stadion 2, 1076 DE, Amsterdam

Program

Scan the QR code to see the whole program for the event.
Drinks, lunch and dinner are included in the price.

The event is organised by Easier Dental Care.
